1 Software Deployment, Past, Present and Future
Alan Dearle
May 2007   **2007 Future of Software Engineering FOSE '07**
Publisher: IEEE Computer Society
Full text available: 📄 pdf(390.24 KB)   Additional Information: full citation, abstract, index terms

This paper examines the dimensions influencing the past and present and speculates on the future of software deployment. Software deployment is a postproduction activity that is performed for or by the customer of a piece of software. Today's software often consists of a large number of components each offering and requiring services of other components. Such components are often deployed into distributed, heterogeneous environments adding to the complexity of software deployment. This paper set ...
